Dear Resident of Kirkwood, MO,

Your community will be performing asphalt maintenance on your community's streets. Please be advised that the contractor, Corrective Asphalt Materials, LLC (CAM, LLC), is scheduled to do work on your street. Consequently there will be

No On-Street Parking from August 18th and 19th

Between the hours of 7:00 am - 7:00 pm

(Please be aware that this treatment is weather dependent, if the forecast calls for rain, operations will be delayed)

If you have a lawn sprinkling system that sprays or drains onto the street pavement you should turn it off for the day in which work will be performed on your street and one day following the treatment. Also please refrain from discharging your sump pump onto the street during this time.

Treatment FAQ:

Why is this product being applied to my road? CAM, LLC will be applying Reclamite Maltene Based Rejuvenating Agent to your roads. Reclamite is a product designed to extend the life of pavement by sealing the pavement from the elements. The municipalities' preventative maintenance effort will minimize the need for more costly and disruptive methods of street repair.

How long does the process take? Once the contractor begins on your street, the process will only take a few hours. The material is sprayed on in a one pass application and is covered with a limestone screening after a short time. Once the road has been treated with limestone screenings, the road will be fully opened to traffic.

When can I drive on the road? If there is no alternative route, please stay on the side of the road that has been treated with screenings. When driving on screenings, please go slow and use caution. **PLEASE DO NOT DRIVE ON THE FRESH OIL.** Be advised that driving onto the fresh oil (area not covered with screenings) may cause "tracking" from your vehicle and may cause driveways, sidewalks, etc. to become temporarily stained. This "staining" is only temporary and will fade over time.

When will the road be cleaned up? After the product is applied, an application of limestone screenings will be applied to the road. This is not permanent. The screenings will be swept up in a day or two after the product is applied.

These agents are environmentally safe and extend the pavement's life. A bug and tar remover (available at any local auto parts store) will safely remove any material on your vehicle, the sooner the easier it will be to remove. Please work with us through any inconveniences during the application process.

Thanks for your patience,
Corrective Asphalt Materials, LLC
